STROBE Statement—checklist of items that should be included in reports of observational studies

	Item No	Recommendation			
Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the			
		abstract			
		(b) Provide in the abstract an informative and balanced summary of what was	1-2		
		done and what was found			
Introduction			•		
Background/rationale	2	Explain the scientific background and rationale for the investigation being	2		
		reported			
Objectives	3	State specific objectives, including any prespecified hypotheses			
Methods					
Study design	4	Present key elements of study design early in the paper			
Setting	5	Describe the setting, locations, and relevant dates, including periods of	3-4; Tbl.		
C		recruitment, exposure, follow-up, and data collection			
Participants	6	(a) Cohort study—Give the eligibility criteria, and the sources and methods	3-4		
		of selection of participants. Describe methods of follow-up			
		Case-control study—Give the eligibility criteria, and the sources and methods			
		of case ascertainment and control selection. Give the rationale for the choice			
		of cases and controls			
		Cross-sectional study—Give the eligibility criteria, and the sources and			
		methods of selection of participants			
		(b) Cohort study—For matched studies, give matching criteria and number of	Not		
		exposed and unexposed	applicable		
		Case-control study—For matched studies, give matching criteria and the	11		
		number of controls per case			
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and	3-4		
		effect modifiers. Give diagnostic criteria, if applicable			
Data sources/	8*	For each variable of interest, give sources of data and details of methods of	3-4, Tbl. 1		
measurement		assessment (measurement). Describe comparability of assessment methods if	,		
		there is more than one group			
Bias	9	there is more than one group  Describe any efforts to address potential sources of bias	10		
	9	Describe any efforts to address potential sources of bias			
Study size	10	Describe any efforts to address potential sources of bias  Explain how the study size was arrived at	3-4; Fig. 2		
		Describe any efforts to address potential sources of bias  Explain how the study size was arrived at  Explain how quantitative variables were handled in the analyses. If			
Study size Quantitative variables	10 11	Describe any efforts to address potential sources of bias  Explain how the study size was arrived at  Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why	3-4; Fig. 2 3-4		
Study size	10	Describe any efforts to address potential sources of bias  Explain how the study size was arrived at  Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why  (a) Describe all statistical methods, including those used to control for	3-4; Fig. 2		
Study size Quantitative variables	10 11	Describe any efforts to address potential sources of bias  Explain how the study size was arrived at  Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why  (a) Describe all statistical methods, including those used to control for confounding	3-4; Fig. 2 3-4		
Study size Quantitative variables	10 11	Describe any efforts to address potential sources of bias  Explain how the study size was arrived at  Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why  (a) Describe all statistical methods, including those used to control for confounding  (b) Describe any methods used to examine subgroups and interactions	3-4; Fig. 2 3-4 4		
Study size Quantitative variables	10 11	Describe any efforts to address potential sources of bias  Explain how the study size was arrived at  Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why  (a) Describe all statistical methods, including those used to control for confounding  (b) Describe any methods used to examine subgroups and interactions  (c) Explain how missing data were addressed	3-4; Fig. 2 3-4 4 4 3-4, Fig. 2		
Study size Quantitative variables	10 11	Describe any efforts to address potential sources of bias  Explain how the study size was arrived at  Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why  (a) Describe all statistical methods, including those used to control for confounding  (b) Describe any methods used to examine subgroups and interactions  (c) Explain how missing data were addressed  (d) Cohort study—If applicable, explain how loss to follow-up was addressed	3-4; Fig. 2 3-4 4		
Study size Quantitative variables	10 11	Describe any efforts to address potential sources of bias  Explain how the study size was arrived at  Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why  (a) Describe all statistical methods, including those used to control for confounding  (b) Describe any methods used to examine subgroups and interactions  (c) Explain how missing data were addressed  (d) Cohort study—If applicable, explain how loss to follow-up was addressed Case-control study—If applicable, explain how matching of cases and	3-4; Fig. 2 3-4 4 4 3-4, Fig. 2		
Study size Quantitative variables	10 11	Describe any efforts to address potential sources of bias  Explain how the study size was arrived at  Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why  (a) Describe all statistical methods, including those used to control for confounding  (b) Describe any methods used to examine subgroups and interactions  (c) Explain how missing data were addressed  (d) Cohort study—If applicable, explain how loss to follow-up was addressed Case-control study—If applicable, explain how matching of cases and controls was addressed	3-4; Fig. 2 3-4 4 4 3-4, Fig. 2		
Study size Quantitative variables	10 11	Describe any efforts to address potential sources of bias  Explain how the study size was arrived at  Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why  (a) Describe all statistical methods, including those used to control for confounding  (b) Describe any methods used to examine subgroups and interactions  (c) Explain how missing data were addressed  (d) Cohort study—If applicable, explain how loss to follow-up was addressed Case-control study—If applicable, explain how matching of cases and	3-4; Fig. 2 3-4 4 4 3-4, Fig. 2

Report numbers of individuals at each stage of study—eg numbers potentially	
Report numbers of individuals at each stage of study—eg numbers potentially	Fig. 2
igible, examined for eligibility, confirmed eligible, included in the study, completing	
llow-up, and analysed	
) Give reasons for non-participation at each stage	Fig. 2
) Consider use of a flow diagram	Fig. 2
) Give characteristics of study participants (eg demographic, clinical, social) and	Tbl. 1
formation on exposures and potential confounders	
) Indicate number of participants with missing data for each variable of interest	5; Fig. 2
) Cohort study—Summarise follow-up time (eg, average and total amount)	5
ohort study—Report numbers of outcome events or summary measures over time	5-7
ase-control study—Report numbers in each exposure category, or summary	
easures of exposure	
ross-sectional study—Report numbers of outcome events or summary measures	
) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and	5-7, Fig. 3-
eir precision (eg, 95% confidence interval). Make clear which confounders were	7
ljusted for and why they were included	
) Report category boundaries when continuous variables were categorized	5-7
) If relevant, consider translating estimates of relative risk into absolute risk for a	Not
eaningful time period	applicable
eport other analyses done—eg analyses of subgroups and interactions, and nsitivity analyses	5-7
immarise key results with reference to study objectives	11
iscuss limitations of the study, taking into account sources of potential bias or	10
apprecision. Discuss both direction and magnitude of any potential bias	
ive a cautious overall interpretation of results considering objectives, limitations,	8-10, Tbl.
ultiplicity of analyses, results from similar studies, and other relevant evidence	2
iscuss the generalisability (external validity) of the study results	11
ive the source of funding and the role of the funders for the present study and, if	5
	llow-up, and analysed ) Give reasons for non-participation at each stage ) Consider use of a flow diagram ) Give characteristics of study participants (eg demographic, clinical, social) and formation on exposures and potential confounders ) Indicate number of participants with missing data for each variable of interest ) Cohort study—Summarise follow-up time (eg, average and total amount)  whort study—Report numbers of outcome events or summary measures over time asse-control study—Report numbers in each exposure category, or summary easures of exposure  coss-sectional study—Report numbers of outcome events or summary measures ) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and eir precision (eg, 95% confidence interval). Make clear which confounders were justed for and why they were included ) Report category boundaries when continuous variables were categorized ) If relevant, consider translating estimates of relative risk into absolute risk for a eaningful time period eport other analyses done—eg analyses of subgroups and interactions, and instituity analyses  ummarise key results with reference to study objectives scuss limitations of the study, taking into account sources of potential bias or aprecision. Discuss both direction and magnitude of any potential bias  ve a cautious overall interpretation of results considering objectives, limitations, altiplicity of analyses, results from similar studies, and other relevant evidence

<sup>\*</sup>Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.

**Note:** An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at http://www.plosmedicine.org/, Annals of Internal Medicine at http://www.annals.org/, and Epidemiology at http://www.epidem.com/). Information on the STROBE Initiative is available at www.strobe-statement.org.
