

Preface

Most of the investigations on which this dissertation is based were conducted during my time of service in the Department of Clinical Physiology, Bispebjerg Hospital, Copenhagen. I owe a debt of deep gratitude to the Head of this renowned department, Niels A. Lassen, M.D., who inspired me to start the study and who followed it through all its phases with great enthusiasm. My thanks are due also to Erik Hart Hansen, M.D., Professor of Surgery, to Philip Sager, M.D., Surgeron-in-Chief, and to Hugh Dovey, M.D., Surgeon-in-Chief, Surgical Department M, Bispebjerg Hospital, for splendid working conditions during the investigations and later during my time of service in their department. A large part of the study was performed in close cooperation with this department. Another part of the studies was carried out while I was in the Department of Clinical Physiology, Frederiksberg Hospital, where I enjoyed the kind interest and excellent working conditions afforded me by its Heads, André Larsen, M.D. and Jens Trap-Jensen.

To Per Sejrsen, M.D., Institute of Physiology B, University of Copenhagen, I am indebted for his keen interest and good working conditions. Some of the investigations were done in close relation to his department. To Professor G. Asboe-Hansen, M.D., Head of the Department of Dermatology G, Rigshospitalet, University of Copenhagen, I am indebted for the permission to employ the equipment for vital microscopy. I would like to express my gratitude to all my co-authors for a splendid cooperation and to K. H. Tønnesen, M. D., Head of the Department of Clinical Physiology, Bis-

pebjerg Hospital, for many stimulating discussions. To Kai Dohn and Kurt Rechnagel, Heads of the Department of Orthopaedic Surgery O, Frederiksborg County Hospital, as well as to the late Knud Jansen, M.D., and to Flemming Sigurd Rasmussen, M.D., Heads of the Department of Orthopaedic Surgery T₂, Gentofte Hospital, my thanks are due for letting me examine their patients.

I am greatly indebted to Inge Rasmussen and Bodil Norup, Medical Secretaries, who typed the papers and the dissertation with such great patience. To the staffs of all the departments I am sincerely grateful for much help and patience. The Department of Art and Photography and the laboratory staff of the Department of Clinical Physiology, Bispebjerg Hospital, made the illustrations with great skill.

I acknowledge my indebtedness for financial aid from the Medical Research Foundation for Greater Copenhagen, the Faroe Islands, and Greenland, the Danish Hearth Association, the Danish Medical Research Council, the Guildal Foundation, and the King Christian X Foundation.

My wife, Lene, with undaunted spirit, and our four children, Peter, Lea, Adam and Julie, with patience beyond expectation, have upheld domestic happiness throughout the long years of labour. Last, but not least, I thank my parents.

Copenhagen, March 1985
Per Evald Holstein
