

ERRATUM

Acta Orthopaedica Scandinavica

Vol. 54, No. 1, 64–74, 1983

Please note the following changes in the figures in M. Järvinen et al.'s article "Age dependent repair of muscle rupture".

Figures 7 and 8 should be deleted.

Figures 9 and 10 are in fact Figures 7 and 8 and

should appear over the legends to these figures.

New Figures 9 and 10 are reproduced below and should appear over the legends to these figures.

We regret the confusion caused by this error.

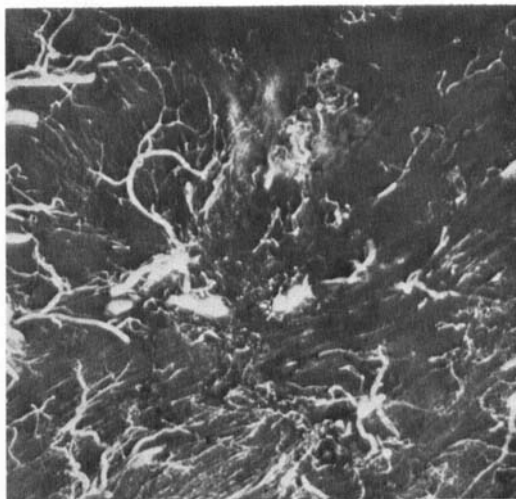

Figure 9. Microangiogram of the muscle rupture 21 days post-traumatization in a young rat. Completely vascularized injury with radial growth of vessels is seen in the middle of the Figure. $\times 42.5$.

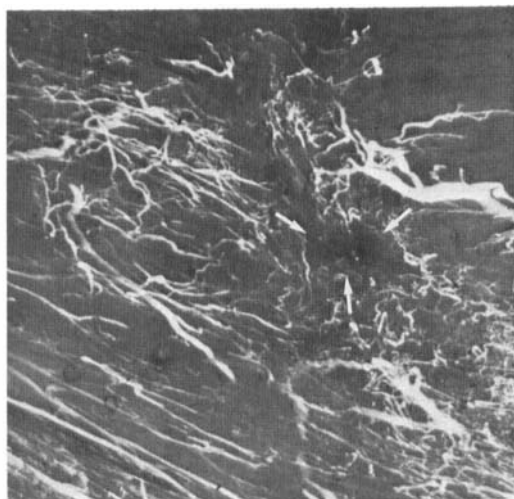

Figure 10. Microangiogram 21 days post-traumatization in an old rat. In the middle of the injured area there is still a small nonvascularized area (→), ($\times 42.5$) and the vessels are less tortuous and branched compared with those of the young animal (Figure 9).
